

Progress Report

Existing labeled Medical Data for Decision Tree

My new task is to find existing decision tree for our chatbot. I have sent the messages to the github project with disease data, but got no reply yet. "Lessons from Natural Language Inference in the Clinical Domain" and "Incorporating Domain Knowledge into Medical NLI using Knowledge Graphs" mentioned a possible dataset called "MedNLI" which might be useful(<https://jgc128.github.io/mednli/> (<https://jgc128.github.io/mednli/>)).

A Survey on Dialogue Systems: Recent Advances and New Frontiers.

Another idea (maybe stupid) ¶

If we cannot find suitable dataset, can we diagnosis by calculating text similarity?
