

Progress Report

Existing labled Medical Data for Decision Tree

To access "MedNLI" data (<https://jgc128.github.io/mednli/>), we need to finish a training. I'm doing it.

Literature Review

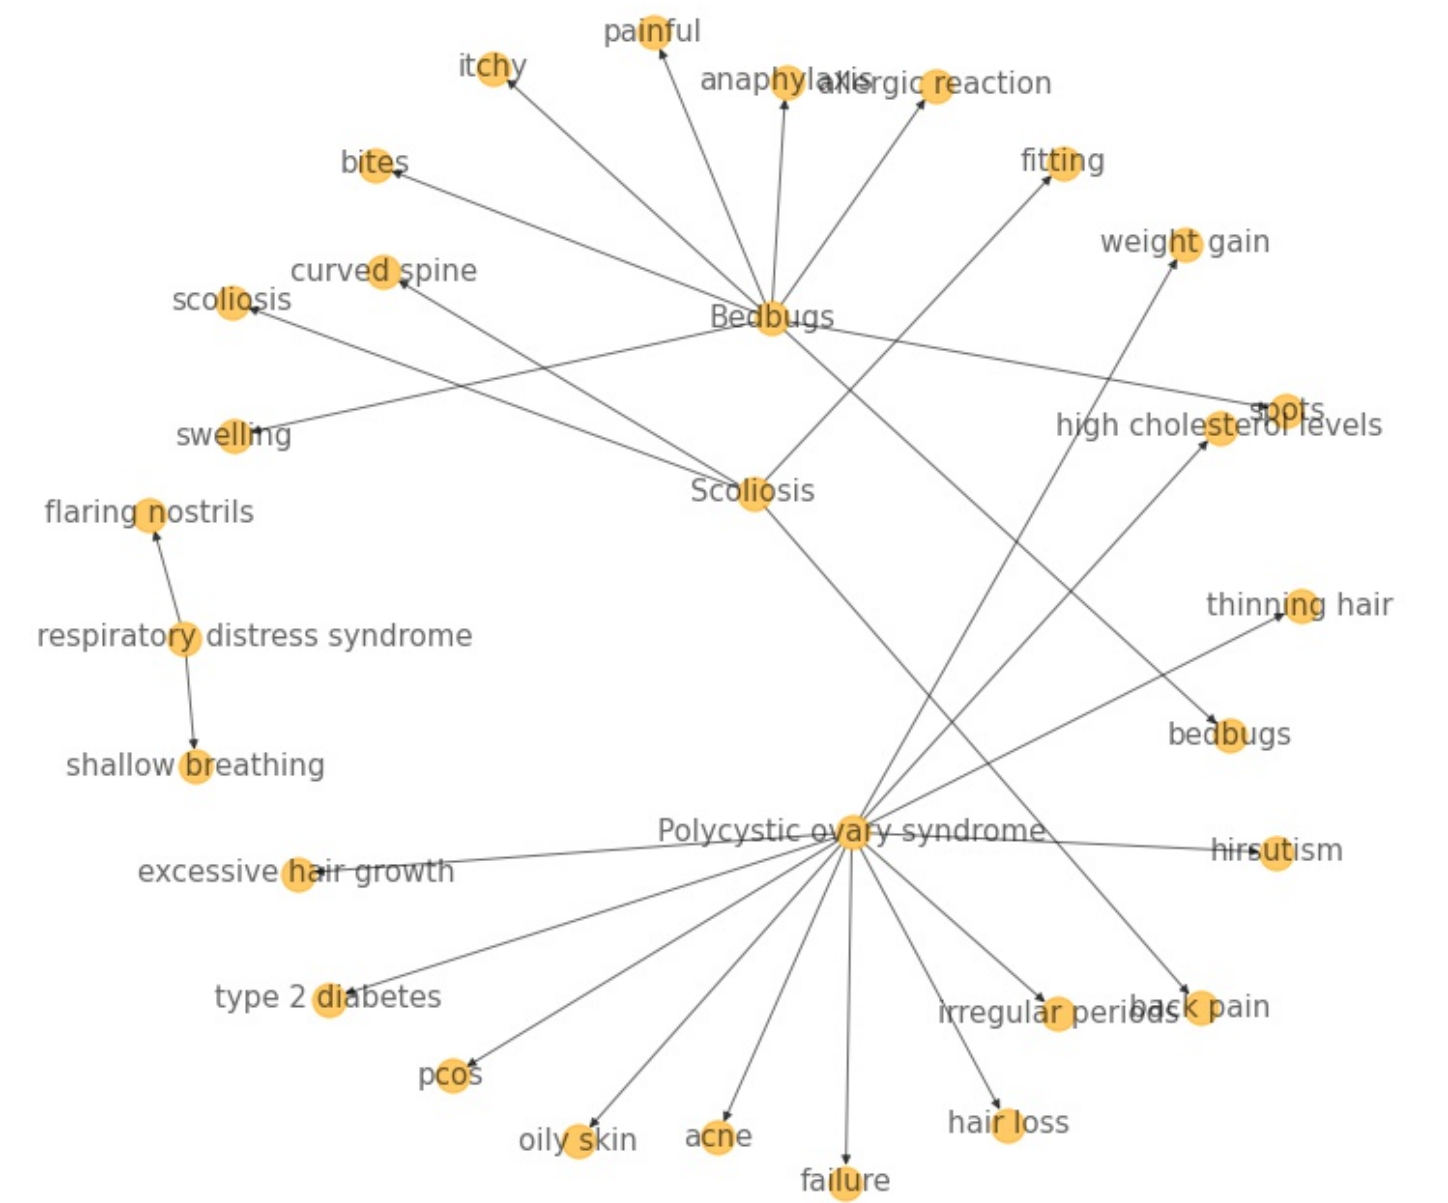

Chen H, Liu X, Yin D, et al. A survey on dialogue systems: Recent advances and new frontiers[J]. Acm Sigkdd Explorations Newsletter, 2017, 19(2): 25-35.

Zhang Z, Takanobu R, Zhu Q, et al. Recent advances and challenges in task-oriented dialog systems[J]. Science China Technological Sciences, 2020: 1-17.

Based on the result comments from my probationary review, I read some survey paper to find some possible future work for my own research in medical chatbot.

Simple Graph for the demo

I write some code to build a graph using python library: NetworkX. The data comes from Ruibin, including 268 diseases and related symptoms. Here's a demo:

New Workpakage Table / Gantt Chart

I have created a table for detailed project progress. Each member only input their responsibility and start date and possible duration.
